Top film

---

## Fully automatic top film dispenser type CTFP-2

---

Applies plastic film on top  
of palletised goods

## CTFP-2

The Cyklop top film dispenser is usually included in a fully automatic line next to a stretch-wrapping machine when palletised goods need to be protected from dust or damp on top. This compact machine is made of aluminium.

Programmable logic control systems and frequency converters make the machine highly flexible and easy to customise.

For extra water protection, the machine can be fitted with equipment which, together with the Cyklop stretchwrapper, will also meet this requirement.

Among other advantages our patented method makes it possible for one person to change the film spool, as it is mounted close to the floor and does not have to be lifted above the conveyor line.

## Specification

- CAPACITY: 110 pallets/h
- POWER: 3 x 230/400V, 50 Hz, 0.4 kW
- PNEUMATICS: 6 bar, ca 1 l/cycle approx
- FILM WIDTH: 1600 or 1300 mm, depending on choice of cassette
- FILM LENGTH: Max 2000 mm (special lengths also available)
